ABSTRACT.

10 The invention relates to a reformer for reacting fuel (12)
and oxidant (16, 18, 20) to reformat (22). Said reformer
comprises an oxidizing zone (24) and a reforming zone (26).
A mixture of fuel (12) and oxidant (16, 18, 20) is deliv-
15 ered to the oxidizing zone (24) and is delivered at least
in part to the reforming zone (26) following at least par-
tial oxidation of the fuel (12). According to the inven-
tion, fuel (14) can be additionally delivered to the re-
forming zone (26) while heat (28) can be supplied to the
reforming zone (26). The invention further relates to a
20 method for reacting fuel (12) and oxidant (16, 18, 20) to
reformat.
